                                                                                           g
                                                                                                                                                                                         C-delta-1 polypeptide (AAW00876) is the chick homologue of Drosophila Delta, a protein that binds to Notch protein. Expression of C-Delta-1 correlates with onset of neurogenesis. The C-delta-1 amino acid sequence was deduced from a cDNA clone (AAT58898) obtd. from chick stage 4-6 embryos. A shorter version (AAM58877) of C-Delta-1, lacking the 12 C-terminal amino acids of the longer version, was also isolated, and mouse (AAW11720) and human (AAW11721-38) Delta-1 polypeptides have been identified. Delta-1 proteins can be used to treat or prevent disorders or colon cancer, melanoma or seminoma, and nervous system disorders promote tissue regeneration and repair

             correlates with onset of neurogenesis. The C-delta-1 amino acid sequence was deduced from a cDNA clone (AAT58897) obtd. from chick stage 4-6 and subcratively spliced variant (AAW00876) was also isolated, and mouse (AAW1172) and human (AAW11721 - 38) Delta-1 polypeptides have been identified. Delta-1 proteins can be used to treat or prevent disorders characterised by increased Notch activity, such as cervical, breast, lung or colon cancer, melanoma or seminoma, and nervous system
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               RCEH-PCHNGATCHRR----YCECA-GYGG-NCQFLLPEPP-GPV------DEEQ 458

This Bequence represents the chart apporer and actor sequence.

This bequence represents the chart contains a sequence which is cleaved by the metalloprotease-disintigrin Kuzbanian (Kuz). Cleavage by Kuz results in two fragments, a soluble amino terminal fragment consisting cessentially of the extracellular domain, and a membrane bound fragment consisting of the transmembrane domain and the intracellular domain. The soluble fragment is able to bind to North. Delta plays a key role in differentiation, and therefore detection and measurement of delta activation is important in the study of differentiation. The invention relates to the delta cleavage peptides (the activation. Delta cleavage peptides) and chimeric proteins are useful for modulating the activity of motelia card or its antibody, the activity or levels of delta protein or nucleic acid or its antibody, the activity or levels of delta protein is modulated and vice versa. A delta cleavage peptide or its darivative concelled and vice versa. A delta cleavage peptide or its darivative concelled and vice versa. A delta cleavage peptide or its darivative concelled and vice versa. A delta cleavage peptide or its darivative concerning and its antibody, the activity or levels of delta protein is modulated and vice versa. A delta cleavage peptide or its darivative concerning cartivity comparable of binding kuz protein is useful for treating or preventing central nervous system disorders associated with increased levels of delta protein bind kuz protein. A complex of delta protein and kuz protein. A complex of delta protein and seample to bind kuz protein. A complex of delta protein and seample to bind kuz protein. A complex of delta protein and sample to bind kuz protein. A complex of delta protein and seample to bind kuz protein. A complex of complex, comprising measuring the ability of delta protein and seample to bind kuz protein. A complex of complex or RNA encoding delta or kuz in a sample. The delta cleavage confise. Keloid formation protein protein protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New cleavage peptide, nucleic acids and antibodies useful for diagnosis, prevention and treatment of cancer, disorders of central nervous system,
                                      Delta; Kuz; Notch; differentiation; cervical; breast; colon; cancer; lung; melanoma; seminoma; central nervous system disorder; psoriasis; tissue regeneration; liver cirrhosis; keloid formation; baldness; inner ear disorder; chick.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        LASALLC-----GCCTFFRVCLL-NRNCCRGG------GCCTFFRVCL

This sequence represents the murine delta protein amino acid sequence.

Delta is a toporythmic protein that contains a sequence which is cleaved

by the metalloprotease-disintigrin Kuzbanian in Kuzb. (Leavage by Kuz

results in two fragments, a soluble amino terminal fragment consisting

cresults in two fragments, a soluble amino terminal fragment consisting

cresults in two fragments domain, and a membrane bound fragment

consisting of the transmembrane domain and the intracellular domain. The

consisting of the transmembrane domain and the intracellular domain. The

coluble fragment is able to bind to Notch. Delta plays a key role in

differentiation, and therefore detection and measurement of delta

cortivation is important in the study of differentiation. The invention

cortivation is important in the study of differentiation. The invention

cortivate of the delta cleavage peptides (the activation Delta cleavage

peptides, and chimmeric proteins are useful for modulating the activity of

methods for detecting and measuring delta activation. Delta cleavage

cortivation and proteins are useful for modulating the activity of

corpable of binding kuz protein is useful for treating or preventing a

disease or disorder associated with increased delta activity or

It is expressed primarily in presomitic mesoderm, the central and peripheral nervous systems, and kidney. Chick (AAW11719) and human (AAW11721- 38) Delta-1 polypeptides

Modulating the differentiation of embryonic stem cells by providing ligands which bind receptors in the Notch and Wnt pathways, useful for treating diseases such as Parkinson's, Huntington's, heart disease, diabetes and AIDS.

Claim 6; Fig 3; 121pp; English.

The invention relates to modulating the differentiation of an embryonic stem cells.

Stranged to comprising: (a) providing a culture of embryonic stem cells.

(b) providing at least one ligand or its active binding fragment, capable of binding its cognate receptor polypeptide expressed by the embryonic stem cells.

(c) binding its cognate receptor polypeptide expressed by the embryonic stem cells.

(d) forwing a culture comprising embryonic stem cells.

(e) forwing a culture comprising embryonic stem cells.

(i) any of § fully defined with an uncleic acid molecule selected from: comprising a cell transfected with a nucleic acid sequences.

(i) any of § fully defined with uncleic acid sequences; (ii) a nucleic acid molecule that hybridies to the nucleic acid in (i), and which endocase a ligand capable of binding a whit receptor; or (iii) nucleic acid molecules which are degenerate as a result of the genetic code to the sequences of (i) or (ii); (b) forming a culture comprising the cell identified in (a) with an embryonic stem cells, and (a) growing the cell culture for the maintenance and/or differentiation of the embryonic stem cells (a) providing at least one polypeptide or its active cell; (a) Inhibition the differentiation of embryonic stem cells in an undifferentiated state; or (i) Inhibiting the differentiation of embryonic stem cells in an undifferentiated state; or (i) Inhibiting the differentiation of embryonic stem cells in an undifferentiated state; or (i) Inhibiting the differentiation of embryonic stem cells in an undifferentiated state; or (i) Inhibiting the differentiation of embryonic stem cells in an undifferentiated state; or (i) inhibiting put coll coll capable of thinhibiting which signalling a culture for the maintenance of corpusation of embryonic stem cells in an undifferentiated state; or (i) inhibiting which signalling a culture for the maintenance of comprising a coll dendicial selected from (i) with an uncleic acid molecule selected from (i) inhibiting by propering the cell identified

                                                                                                                                                                                                                                                                                                                                                                                                               8
                                                                                                                                                                                                                                                                                                                                                                                                                                            셤
                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to a novel screening method which enables the identification of biologically active agents which mediate their effect through the activation of genes. The method involves providing a population of cells stably transfected with a nucleic acid encoding a reporter molecule, cloning the transfected cells into a cell array, creporter molecule, cloning the transfected cells into a cell array, a signal generated by the reporter molecule as a result of exposure to the agent. The method is useful in identifying biologically active agents and the genes through which the agents act, in screening potential drugs for their ability to activate certain drug targets in a high-throughout assay, in identifying relationships between signalling pathways and specific signals that could be useful in eventually directing the differentiation of embryonic stem cells and in toxicology assays by creating for unwanted activation or inhibition of specific signalling pathways. The present sequence is murine notch ligand delta-like i protein used to illustrate the method of the invention
                                                                                                                                                                                                                                                                                                                 Identifying biologically active agents comprises cloning transfected cells into a cell array, exposing the array to an agent to be tested, and detecting signals generated by a reporter molecule as a result of exposure to the agent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         LIIEALHTDSPDDL-TENPERLISRL-TQRHL-VGEEWSQDLHSSGRTDL-YSYRFVCDE 156

```
This sequence represents the human delta-1 protein, which is a ligand of the human notch protein. The protein or fragments, especially AAW75493-W75495, can be used as a drug to control vascular cells. The sequences were isolated and the truncated fragments were generated using the
                                                                                                                                                                                            Disclosure; Page 16-19; 21pp; Japanese

Human delta-2 is a differentiation inhibitor which inhibits the differentiation of undifferentiated cells (other than brain or muscle cells), such as blood cells, and enhances the proliferation of undifferentiated blood cells. Products of human delta-2 may be used for the treatment of diseases such as leukaemia and malignant tumours. They may also be used in the culture of human cells in vitro, e.g. for production of supplies of undifferentiated blood cells. The present sequence represents human delta-1, from an example of the present

The present invention describes sixty four human PRO proteins which can be used in the treatment of immune related diseases. The human PRO proteins, anti-PRO antibodies, agonists and antagonists are useful for treating and disquosing immune related disorders are useful for treating and disquosing immune related disorders are selected from systemic lupus erythematosus, rheumatoid arthritis, osteoarthitis, juvenile chronic arthritis, spondyloarthogathiss, systemic sclerosis, idiopathic inflammatory myopathies, Sjogran's systemic vasculitis, saxcoidosis, autoimmune haemolytic anaemia, autoimmune thrombocytopaenia, thyroiditis, diabetes mellitus, immune-mediated renal disease, demyelinating diseases of the central and peripheral nervous systems, hepatobiliary diseases inflammatory bowel disease, gluten-sensitive enteropathy and Whipple's disease, autoimmune diseases, altergic diseases, immunological diseases of the lung, and transplantation associated diseases including graft rejection and graft-versus-host-disease. AAC58337 to AAC58578 represent PCR primers and hybridisation probes used in the isolation of human PRO polymucleotide and protein sequences given in the represent human PRO polymucleotide and protein sequences given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sixty four PRO polypeptides, useful in the diagnosis and treatment of immune related disorders, e.g. systemic lupus erythematosis, rheumatoid arthritis, osteoarthritis, thyroiditis and diabetes mellitus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  KP, Goddard A, Gurney AL, Hebert C, Henzel W;

The present invention describes nucleic acids encoding PRO polypeptides useful for preventing, diagnosing and treating diagnosing a cardiovascular, endothelial or angiogenic disorder in mammals by modulating cell proliferation, angiogenesis and cardiovascularisation, and for identifying agonists and antagonists of these processes. The nucleic acids and the proteins they encode may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate PRO expression such as cardiovascular, endothelial or angiogenic disorders in mammals (e.g. atherosclerosis, cancers and cardiac hypertrophy.) For example, the nucleic acids (NCS) and vectors containing them and the PRO polypeptide may be used to treat disorders associated with decreased PRO expression. AAA77510 to AAA77721 and AAB24388 to AAB24415 represent nucleocide and protein sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                             Nucleic acids encoding PRO polypeptides useful for preventing, diagnosing and treating diagnosing a cardiovascular, endothelial or angiogenic disorders in mammals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      PEPPCTYGSA-TPVLG--SFS-PDGAG-DPAFSNPIRPFGFTWPGTFSLIIEALHTDSP

consisting of the transmembrane domain and the intracellular domain. The soluble fragment is able to bind to Notch. Delta plays a key role in differentiation, and therefore detection and measurement of delta activation is important in the study of differentiation. The invention carrivation is important in the study of differentiation. The invention content of the delta cleavage peptides (the active fragment), and to content of the delta or the delta activation. Delta cleavage peptides, and chimeric proteins are useful for modulating the activity of Notch, delta or kuz or at least one of the signalling pathways in a cell content or the supportance of the signalling pathways in a cell content or transmism, expressing Notch. By contacting a cell with kuz protein or nucleic acid or its antibody, the activity or levels of delta protein is modulated and vice versa. A delta cleavage peptide or its derivative capable of binding kuz protein is useful for treating or preventing and classase or disorder associated with increased delta activity or seminoma in humans. A recombinant cell comprising a delta peptide is useful for the diagnosis of diseases or certificated with increased levels of Notch-delta protein binding contents or preventing central nervous system disporters. A cells caleavage peptide is useful for the diagnosis of diseases or continuous protein. A complex of delta protein and kuz is useful. Content of containing the ability of delta cleavage peptide is useful for the diagnosis of diseases or contained with increased levels of forth and kuz is useful.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              111

```

..

This sequence represents the human delta protein amino acid sequence. Delta is a toporythmic protein that contains a sequence which is cleaved by the metalloprotease-disintigrin Kuzbanian (Kuz). Cleavage by Kuz results in two fragments, a soluble amino terminal fragment consisting essentially of the extracellular domain, and a membrane bound fragment

Isolated PRO211, PRO228, PRO538, PRO172 or PRO182 polypeptides or their agonists (preferably anti-PRO agonist antibody or a small molecule amincking the biological activity of PRO polypeptide) are useful in vitro or in vivo for inhibiting the growth of a tumour cell. Compositions comprising the PRO polypeptides are useful for inhibiting neoplastic cell growth and for treating cancer including breast, ovarian, renal, colorectal, uterine, prostate, lung, bladder, central nervous system cancer, melanoma and leukaemia in a mammal. The PRO polypeptides are also useful for treating other disorders such as neuronal, glial, astrocytal, hypothalamic and other glandular, macrophagal, epithelial, stromal, blastoccellc disorders and inflammatory, angiogenic and immunologic disorders as well as being useful for identifying agonists to PRO polypeptides by contacting the polypeptide with a candidate molecule and monitoring biological activity mediated by the polypeptide
                                                                                                                                                                                 PRO211, PRO228, PRO538, PRO172 and PRO182 polypeptides useful for treating tumors including cancers of the breast and lung, leukemia and for identifying compounds capable of inhibiting growth of neoplastic cells.
                                                                     Wood WI;

Patent No. 6121045

Patent No. 6121045

GENERAL INFORMATION:

APPLICANT: Gearing, David

TITLE OF INVENTION: THERAPEUTIC USES THEREFOR

NUMBER OF SEQUENCES: 23

CORRESPONDENCE ADDRESS:

ADDRESSEE: FOLEY, HOAG & ELIOT LLP

STREET: One Post Office Square

CITY: Boston

STATE: MA

COUNTRY: USA

COMPUTER READABLE FORM:

MEDIUM TYPE: Floppy disk

COMPUTER: IBM PC Compatible

OMPUTER: BRADABLE FORM:

MEDIUM TYPE: Ploppy disk

COMPUTER: BM PC Compatible

OMPUTER: BM PC Compatible

OMPUTER: BM PC Compatible

OMPUTER: BAPLICATION DATA:

ATPLING DATE: 11-JUN-1997

CLASSIFICATION: 514

ATTORNEY/AGENT INFORMATION:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           RESULT 5
